MONTHLY BUDGET PLANNER

Excel Project Report | January–April 2026

TOTAL RECORDED SPEND	HIGHEST-SPEND MONTH	LARGEST CATEGORY
■10,435	April · ■2,720	Rent · 46.0%

1. Project Overview

This project is a Microsoft Excel monthly budget workbook. The supplied PDF shows a four-month expense table (January to April 2026), category totals and percentages, summary statistics, a pie chart, and separate worksheet tabs for the budget and chart. This report documents the data visible in the supplied workbook export and adds a clearer analytical summary for portfolio presentation.

2. Dataset Summary

The dataset contains five expense categories across four months. Amounts are presented in Indian rupees (■), following the currency symbol visible in the workbook. The source PDF labels the period as “Monthly Budget 2026” and displays Jan, Feb, Mar and Apr.

Expense Category	Jan	Feb	Mar	Apr	4-Month Total	Share
Rent	■1,200	■1,200	■1,200	■1,200	■4,800	46.00%
Car Payment	■450	■500	■450	■650	■2,050	19.65%
Insurance	■700	■700	■700	■700	■2,800	26.83%
Phone	■95	■95	■125	■95	■410	3.93%
Candy	■150	■100	■50	■75	■375	3.59%
TOTAL	**■2,595**	**■2,595**	**■2,525**	**■2,720**	**■10,435**	**100.00%**

3. Key Findings

• Total recorded spending across the four months is **■10,435**.

• April has the highest monthly total at **■2,720**; March is the lowest at **■2,525**.

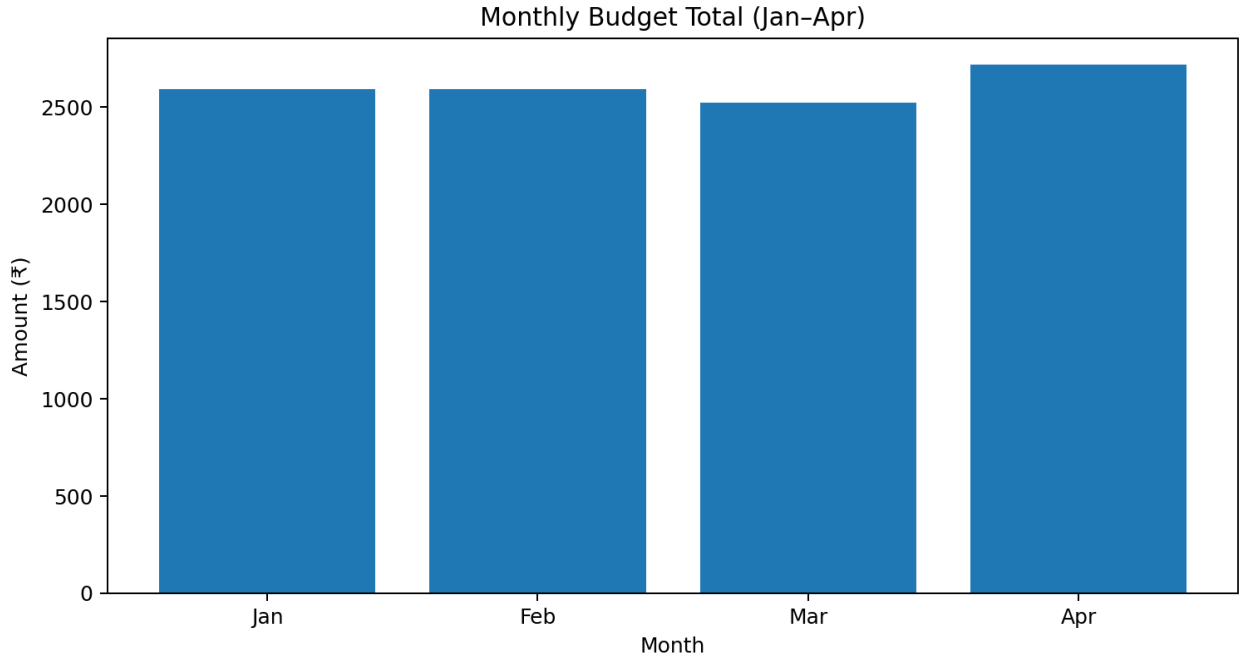

• Rent is the largest category at **■4,800** (46.00% of the recorded total).

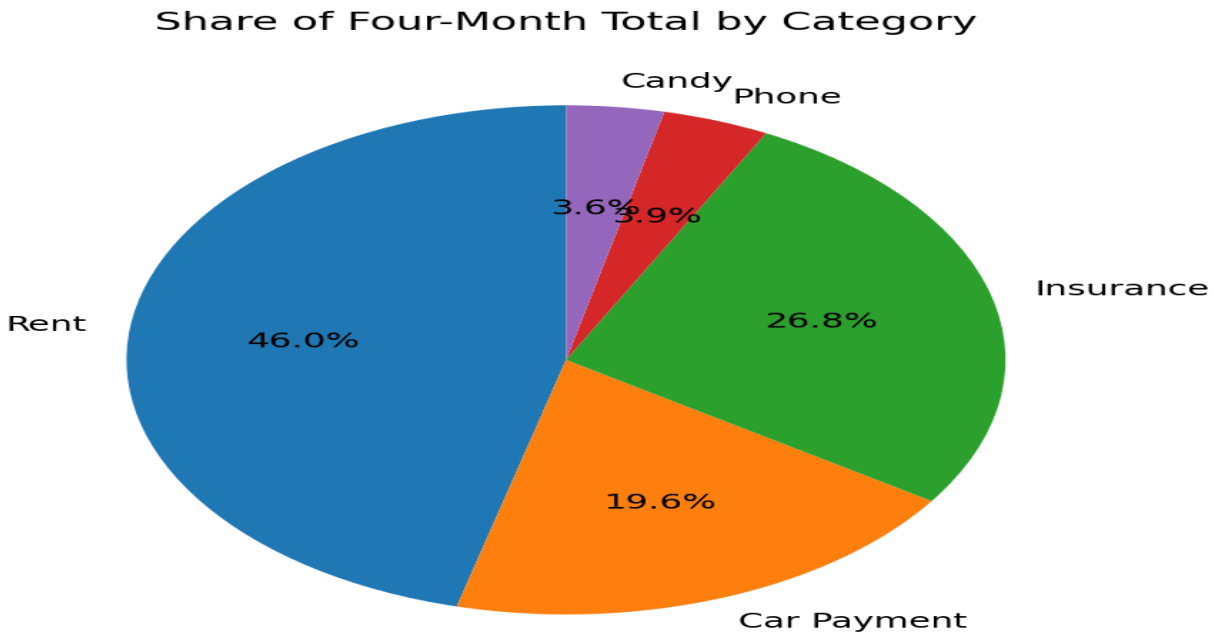

• Insurance contributes **26.83%**, making it the second-largest category.

• Phone and Candy together account for **7.52%** of the total.

4. Data Visualizations

The monthly comparison chart makes it easier to compare spending totals, while the category-share chart shows how the four-month total is distributed across expense types.

5. Excel Skills Demonstrated

The workbook visibly demonstrates structured worksheet layout, category-wise data entry, monthly totals, percentage shares, summary statistics (Average, Min, Max and Count), chart creation, and worksheet organization. The uploaded PDF does not expose the underlying formulas, so this report does not claim to have audited each formula.

6. Recommendations for the Next Version

• Add a separate income section and calculate remaining balance (income minus expenses).

• Add a planned-budget column and an actual-spend column to measure budget variance.

• Use conditional formatting to highlight categories that exceed their planned amount.

• Add a month selector or PivotTable-based summary to make the dashboard easier to explore.

• Show clear chart titles, category labels and data labels; keep the print area and page scaling readable.

• Add a short note defining whether the figures are actual spending, planned spending, or practice/sample data.

7. Tools and Project Deliverables

Tool: Microsoft Excel
Project files: editable Excel workbook (.xlsx), this PDF report, and dashboard preview image (.png).
Author: Abdul Kalam

8. Scope and Data Notes

This report is based on the two-page PDF export supplied in this conversation. It covers only the five listed expense categories and the four months shown. It does not infer annual totals, income, savings, or whether the amounts represent real personal finances. The currency is treated as INR because ■ symbols appear in the source export.

Prepared for GitHub portfolio and LinkedIn project sharing.
